Problem:

In the post-pandemic era, organizations have challenges to conduct productive business meetings remotely.

1 Success of modern business is based on collaboration.

2 Face-to-face meetings are a superior form of collaboration.

3 However, in the post-pandemic era, face to face meetings are difficult to organize and remote work has become a norm.

- Today, organizations use various **screen-based remote collaboration tools** to cope with the problem.
- However, these tools **lack the true human presence** element as well as effective co-creation tools and thus cannot provide the same level of engagement as F2F meetings.

Solution: Glue Platform

Glue is a virtual extension of your workplace — a space where dispersed, high-performance teams come together to learn, share, plan and create.

Human presence

Interact with others remotely as if you were face to face

Collaboration tools

Access a complete toolset for effective live collaboration

Customizable

Create your own custom virtual spaces and scenarios

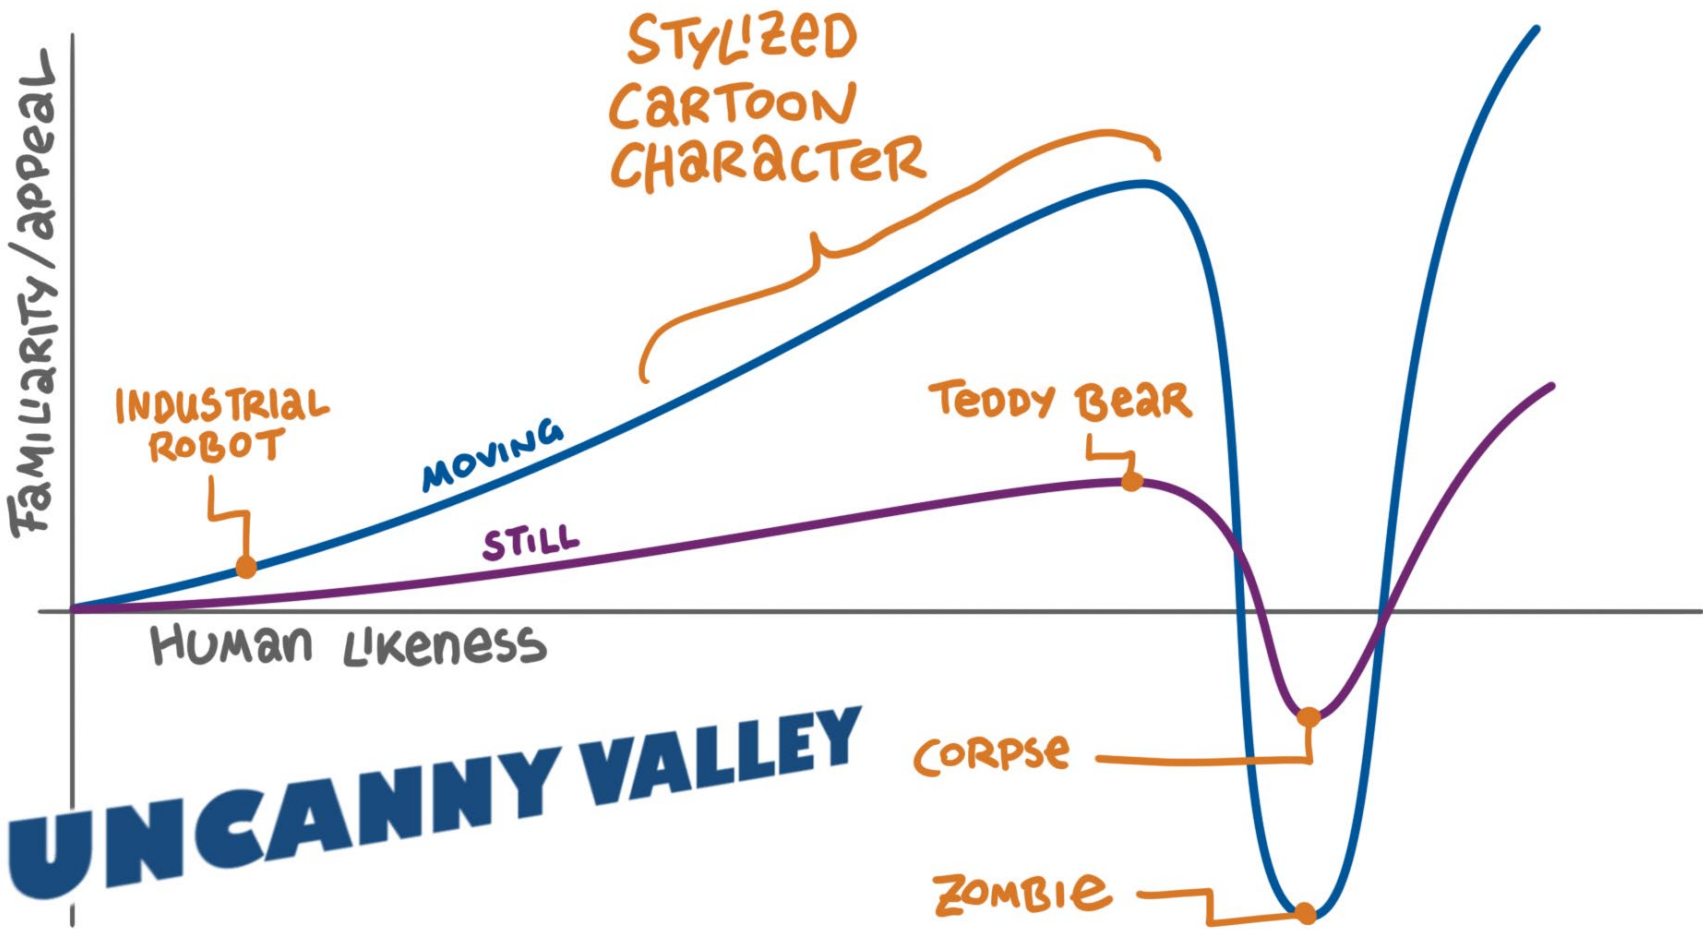

Secure & scalable

Deploy in public cloud or host in your own infrastructure

Human presence.
